Health and Safety, Environment and Quality Audits

A Risk-based Approach

Stephen Asbury, Managing Director of Corporate Risk Systems Limited

Health and Safety, Environment and Quality Audits delivers a powerful and proven risk-based approach to auditing business-critical risk areas. Written in a highly-accessible style, it covers organization-wide audit planning, and all the steps that need to be taken in a successful risk-based audit. Accordingly, it provides an important resource for lead auditors, other auditors, managers, HSEQ professionals and students, and others with a critical interest in governance, assurance and organizational improvement.

Managing Maritime Safety

Edited by Helle A. Oltedal and Margareta Lützhöft

Although it is well evidenced from research in many high-risk industries that a commitment to safety - which includes a robust, effective and well-funded organizational safety management - is a significant determinant of safety outcomes, published university text books from a maritime perspective are extremely limited. This book sets out to provide much needed consolidated knowledge for university level students on maritime safety management, incorporating theoretical, historical, research, operational and design perspectives.

Preventing Corporate Accidents

Robert Whittingham

The passing of the Corporate Manslaughter Bill in the UK and increasing public and investor pressure for good Corporate Governance and Corporate Social Responsibility means organizations more than ever need to ensure they do all they can to prevent major accidents. However, past experience shows that just implementing safety management systems is not enough.

Corporate Accidents shows how major accidents can result from human error and defects in corporate systems. The book describes accident prevention strategies, from safety culture, safety management systems, foresight and planning to safety regulation, whistle blowing, corporate social responsibility and

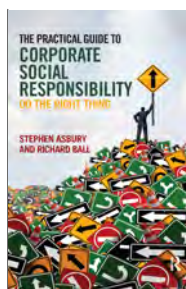

the learning organization.

Environment, Health and Safety Governance and Leadership

The Making of High Reliability Organizations

Waddah S. Ghanem Al Hashmi, Emirates National Oil Company group, Dubai, United Arab Emirates

Environment, Health and Safety Governance and Leadership reviews the factors influencing safety/EHS leadership and governance and addresses all the areas where the role impacts on the performance and sustainability of organisations. The book draws on much of the best practice standards developed by many leading organisations such as the UK Health and Safety Executive (HSE); the Institute of Directors (IoD); and the Organisation for Economic Co-operation and Development (OECD). It provides exclusive insights and legal imperatives for practitioners and leaders to inform decision making, strategy and EHS governance.

The Safety Anarchist

Relying on human expertise and innovation, reducing bureaucracy and compliance

Sidney Dekker

Over the past two decades, the number of safety rules and statutes has exploded, and organizations themselves are creating ever more internal compliance requirements. At the same time, progress on safety has slowed to a crawl. Many incident- and injury rates have flatlined. Bureaucracy and compliance now seems more about managing the liability of the people they work for. It is time for Safety Anarchists: people who trust people more than process, who rely on horizontally coordinating experiences and innovations, who push back against petty rules and coercive compliance, and who help recover the dignity and expertise of human work.

Delivering Resilient Health Care

Edited by Erik Hollnagel, University of Southern Denmark, Jeffrey Braithwaite, Macquarie University, Sydney, Australia and Robert L. Wears, University of Florida, Gainesville, USA

Health care is under tremendous pressure regarding efficiency, safety, and economic viability and has responded by adopting techniques that have been useful in other industries, such as quality management, lean production, and high reliability, with limited results. *Delivering Resilient Health care* presents documented experiences and practical guidance on how to bring Resilient Health Care into practice. It provides concrete advice on how to prepare a study, how choose the right data, how to collect it, how to analyse the data, and how to interpret the results.

Safety-II in Practice

Developing the Resilience Potentials

Erik Hollnagel, University of Southern Denmark

Erik Hollnagel introduces a comprehensive approach for the management of Safety-II, called the Resilience Assessment Grid (RAG). The RAG provides four sets of diagnostic and formative questions that can be tailored to any organisation. The questions are based on the principles of resilience engineering and backed by practical experience from several domains. This book is for both the safety professional and academic reader. For the professional, it presents a workable method (RAG) for the management of Safety-II, with a proven track record. For academic and student readers, the book is a concise and practical presentation of resilience engineering.

The Fearless World of Professional Safety in the 21st Century

Scott Gesinger

The Fearless World of Professional Safety in the 21st Century is a bold statement with an educational perspective, aimed at improving current safety practices and imaginatively adapting to the technological, cultural and generational revolutions of the 21st century. The author has created an entertaining and insightful examination of controversial ideas about changing the safety profession using examples from outside of the world of safety, such as historical events, pop culture and personal experiences.

The End of Heaven

Disaster and Suffering in a Scientific Age

Sidney Dekker, Griffith University, Nathan Campus, Australia

In this unique book, Dekker tackles a largely unexplored dilemma. Our scientific age has equipped us ever better for explaining why things go wrong. But this increasing sophistication actually makes it harder to explain why we suffer. Accidents and disasters have become technical problems without inherent purpose. When told of a disaster, we easily feel lost in the steely emptiness of technical languages of engineering or medicine. Or, in our drive to pinpoint the source of suffering, we succumb to the hunt for a scapegoat, possibly inflicting even greater suffering on others around us. Broad in its historical sweep and ambition, *The End of Heaven* is also Dekker's most personal book to date.

Managing the Uncertainty of Human Error in Operations

Tony Muschara

Society at large tends to misunderstand what safety is all about. It is not just the absence of harm. When nothing bad happens over a period of time, how do you know you are safe? In reality, safety is what you and your people *do* moment by moment, day by day to protect assets from harm and to control the hazards inherent in your operations. This is the purpose of *Risk-Based Thinking*, the key element of the six building blocks of Human and Organizational Performance (HOP).

Christer Pursiainen

The Crisis Management Cycle is the first holistic introduction to the dynamic and multidisciplinary field of crisis management theory. By drawing together the different theories and concepts of crisis management literature and practice, this book develops a theoretical framework of analysis that can be used by both students and practitioners alike. Stretching across disciplines as diverse as safety studies, business studies, security studies, political science and behavioural science, *The Crisis Management Cycle* provides a robust grounding in crisis management that will be invaluable for both students and practitioners worldwide.
