# Medicine and Veterinary Medicine 2018 - 2019

# Welcome

The medical list of Taylor & Francis spans the full spectrum of human medicine and surgery and veterinary medicine, complemented by a range of non-clinical resources. Disciplines in which our range is particularly strong include cardiology, dermatology and cosmetic science, pulmonary medicine, obstetrics, gynecology and reproductive medicine, general surgery, ENT, and orthopaedics and trauma. We cater for medics and surgeons of all levels, from core textbooks for medical students, a comprehensive suite of revision aids to support students and trainee doctors through qualifying examinations, to comprehensive and targeted reference texts of interest throughout professional practice. The list also includes a number of popular and successful series including '100 Cases', 'Making Sense', 'Get Through', 'MasterPass', 'Self-Assessment Colour Reviews' and 'Reproductive Medicine and Assisted Reproductive Techniques'.

Particular strengths of the list are our 'heritage' brands with a long-established pedigree, including *Operative Cardiac Surgery* (formerly Rob & Smith), *Scott Brown's Otorhinolaryngology: Head and Neck Surgery*, *Silver's Joint and Soft Tissue Injection* and *Levick's Introduction to Cardiovascular Physiology*, exciting new editions of which we are delighted to present here.

As well as human medicine, CRC Press has an established international and market-leading Veterinary Medicine portfolio, addressing prevention, diagnosis and treatment of disease, disorders and injuries in animals. Our books cover all animal species and a broad range of conditions. Highlights this year include the third edition of *The CRC Handbook of Marine Mammal Medicine*, a co-publication with the AALAS, *Comparative Anatomy of the Mouse and Rat*, and new books on *Pig Health*, *Goat Medicine and Surgery* and *Fascial Anatomy of the Equine Forelimb*. We also look at *The Welfare of Cattle* and publish several new texts in our bestselling Self-Assessment Color Review series.

All our titles are available in a variety of print and e-formats to suit customer needs. Additionally, many of the Medical and Veterinary Medical books that we publish offer access to a free VitalSource ebook via a unique code in the print edition. The bundled ebook offers a number of benefits including the option to:

- Access online or download to your smartphone, tablet or PC/Mac
- Search the full text of this and other titles you own
- Make and share notes and highlights
- Link through from references to PubMed
- Copy and paste text and figures for use in your own documents
- Customize your view by changing font size and layout

7th Edition

**An Introduction to Radiation Protection**

Alan Martin, Sam Harbison, Health & Safety Consultant based in Kent and formerly Her Majesty's Chief Inspector of Nuclear Installations, Health & Safety Executive, UK, Karen Beach and Peter Cole

This highly-readable account of the nature of the hazards presented by ionizing radiation and the methods of protection is an ideal introductory text for those new to the field, and for the non-specialist. The seventh edition continues to cover the technical principles underlying the control of radiation hazards, radiation detection and measurement and the biological effects of radiation, followed by a consideration of industry-specific radiation protection issues. Further specialised topics include risk assessment, waste management and decommissioning, radiological emergencies, relevant legislation and organizational issues and, new to this edition, environmental radiation protection.

Edited by Burkhard Madea, Institute of Forensic Medicine, University of Bonn, Stiffplatz, Germany

Combining theory and practice, this is a comprehensive analysis of suffocation, asphyxiation, and neck pressure deaths. It includes important developments in the field such as lung histomorphology in fatal strangulation, systematic dissection of the larynx, biochemical findings, and post-mortem imaging. Given the significant challenges in accurately diagnosing these deaths compared to other forms of external violence, international experts explain pitfalls and subtleties of identifying these cases making it a must-have guide for readers involved in such investigations. Tables, statistics, scientific and historical evidence throughout further validate the clinical guidance provided.

4th Edition

**Atlas of Inherited Metabolic Diseases**

William L Nyhan, The William L. Nyhan Biochemical Genetics and Metabolomics Laboratory, USA, Georg F. Hoffman, Department of Pediatrics, University of Heidelberg, Germany and Bruce A Barshop, The William L. Nyhan Biochemical Genetics and Metabolomics Laboratory, USA

In a field where even experts may find that years have elapsed since they last encountered a child with a given disorder, it is essential for the clinician to have a comprehensive source of practical and highly illustrated information covering the whole spectrum of metabolic disease to refer to. The fourth edition of this highly regarded book, authored by some of the foremost authorities in pediatric metabolic medicine, fulfils this need by providing an invaluable insight into the problems associated with metabolic diseases. Throughout the book, plentiful photographs, often showing extremely rare disorders, are an invaluable aid to diagnosis.

Edward Schwarz and Tomos Richards

It is established that learning based on interesting or novel methods makes information more memorable and improves retention. This book explores common medical presentations encountered during a medical student via vignettes that will bring to mind interesting and often humorous characters from literature, stage and screen. By attaching real pathology and clinical cases to characters with which the student can relate from their childhood and adult life, learning is made 'fun' without compromise to the clinical integrity of the content.

A Step-by-Step Approach

Andrew Solomon and Julia Anstey

It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise.

Illustrated Clinical Cases

Edited by Robert A. Weinstein, Rush University Medical Center, Chicago, Illinois, USA and Suja Mathew, Rush University Medical Center, Chicago, Illinois, USA

*Series: Medical Self-Assessment Color Review Series*

Containing 200 challenging clinical cases and illustrated with superb, high quality images, this book covers a wide range of medical problems from basic cases to more challenging case presentations. It provides an invaluable text for medical professionals in practice and in training, for all those taking the MRCP and higher examinations to established physicians in their continuing professional development.

## Complete OSCE Skills for Medical and Surgical Finals

Edited by **Kate Tatham**, Specialty Registrar, Anaesthetics and Intensive Care Medicine, Imperial School of Anaesthesia, London, UK and **Kinesh Patel**, Chelsea and Westminster Hospital, London, UK

The Objective Structured Clinical Examination or OSCE for short is a familiar and often daunting experience for medical students. This book provides the essential information needed to tackle OSCE stations competently and with confidence. Over 150 topics are covered at the perfect level of detail for candidates preparing for final exams. Using bulleted checklists and a succinct writing style, the authors cover the most important points to remember about the key conditions that students are likely to encounter during OSCEs, all in a brief 2 to 4 pages per condition.

2nd Edition

## Handbook of Clinical Skills

Second Edition

Edited by **Peter Kopelman**, Principal of St George's University of London, UK and **Jane Dacre**, President of the Royal College of Physicians, London, UK

First published in 2002, this was one of the first handbooks to focus on the practical application of skills including consultation aimed specifically at medical students and newly-qualified juniors and is extremely well thought of, both in the UK and internationally. This long-awaited revision remains readable, concise and pocket-sized, while being thoroughly updated to reflect the latest requirements of these groups including consent, confidentiality and record keeping, with new chapters on Prescribing and Skills in general practice, procedures reflecting the latest Core Curriculum, and online video material to help students put their acquired skills into effective clinical practice.

## Helping Hands

An Introduction to Diagnostic Strategy and Clinical Reasoning

Caroline Rodgers and Richard Harrington

Diagnostic strategy and clinical reasoning are essential components of becoming an effective clinician, yet they are not always taught as part of the formal curriculum at medical school and currently there are few resources available that introduce medical students and junior doctors to these areas. This brand new textbook is written specifically to address this need. Outlining the process by which a clinician formulates and refines an initial diagnosis and crafts an appropriate management plan, the medical student or junior doctor will develop a critical self-awareness of the strategies they employ in assessing patients and how to improve and enhance their skills.

## Integrated Evaluation of Disability

Ramar Sabapathi Vinayagam

This book addresses integrated evaluation of disability using 'Clinical Tools', 'Activity Participation Skills Assessment Scale', 'Personal Factors Measurement Scale', and 'Environmental Factors Measurement Scale'. Physicians from all disciplines can use this method to evaluate disability pertaining to their respective fields.

2nd Edition

**Memorizing Medicine**

Ben Lovell and Paul Bentley

This book takes a unique approach to 'learning medicine' in a manner that places primary emphasis on recall. Drawing upon well-established psychological principles, it uses a broad range of strategies to maximize the ability of the reader to recollect large swathes of information at a later date. The result is an original and refreshing book in which no two pages are quite alike, and where facts are presented in a hierarchical fashion so that essential features of each condition or symptom can be grasped immediately, while finer points are given in more detailed reading. It can be used as a tool to cement learning from the lecture, tutorial or clinic and is ideal as a finals revision aid.

A Visual Approach

**Sunjay Parmar**, Academic Foundation Doctor & Honorary Teaching Fellow, Sheffield Teaching Hospitals NHS Foundation Trust, United Kingdom

This brand-new revision aid has been designed specifically to help medical students and early post-graduate doctors learn and remember pertinent information about various neurological conditions through pictorial representation, and will be invaluable throughout medical studies and particularly useful in the pressured run-up to final and post-graduate examinations. Neurology is often viewed as a challenging subject to learn. By utilising visual imagery to aid memory and recall of important information, the author brings a refreshing new approach to

knowledge consolidation.

A Lifecourse Epidemiology Approach to Skeletal Health

Edited by **Nicholas C Harvey**, MRC Lifecourse Epidemiology Unit, University of Southampton and **Cyrus Cooper**, MRC Lifecourse Epidemiology Unit, University of Southampton

This is the first book to document comprehensively the 'state of the art' in the lifecourse epidemiology of osteoporosis. In detailed chapters, expert contributors describe the current and projected future burden of disease, developments in the understanding of risk factors for osteoporosis from cradle to grave, the underlying mechanisms, and advances in approaches to risk assessment and treatment. It is essential reading for all students on postgraduate courses in bone health, as well as an important reference for practitioners and researchers in

osteoporosis, epidemiology, and related fields.

6th Edition

**Silver's Joint and Soft Tissue Injection**

Injecting with Confidence

David Silver

This is a comprehensive guide to diagnosing conditions and the benefits (and potential pitfalls) of steroid injections, used by an increasing range of practitioners. It looks at all the practical skills as well as general information, medico-legal issues and clinical errors to avoid. This Sixth Edition has been completely updated and expanded, with two new chapters on the evidence base and inflammatory arthropathy. Updated physiotherapy assessment and treatment options are now incorporated within the chapters on joint injections. The book describes, step-by-step, the required skills for each procedure using full-colour photographs and explanatory illustrations.

5th Edition

**The Renal Drug Handbook**

The Ultimate Prescribing Guide for Renal Practitioners

Caroline Ashley and Aileen Dunleavy

This invaluable guide, endorsed by the UKMi and reflecting the extensive experience of the UK Renal Pharmacy Group, features drug monographs guiding physicians in how to prescribe, prepare, and administer drugs to patients with different levels of kidney function and when undergoing renal replacement therapy. It has been fully updated for this fifth edition to include up to 100 additional drugs, while maintaining the clear structure and format that is easy to use and simple to follow in the busy clinical setting. It continues to offer support and guidance to health care professionals enabling them to prescribe medications

to their renal patients appropriately and safely.

4th Edition

**Atlas of Immunology**

**Julius M. Cruse, MD, PhD**, University of Mississippi Medical Center, Jackson, USA and  
**Robert E. Lewis**, University of Mississippi Medical Center, Jackson, USA

With more than 1300 illustrations and numerous color diagrams and photographs, Atlas of Immunology has been completely revised and updated to reflect recent advances in scientific knowledge and evidence-based research. New material in all immunological subspecialties has been included, ranging from molecular to translational immunology critical to transplant surgery and clinical medicine. There is also expanded coverage of tumor immunology critical for basic science, diagnosis and treatment of cancer as well as latest developments on such timely topics as HIV/AIDS.

A Text and E-Resource for Active Learning

Burt B. Hamrell, Emeritus, Dep. of Molecular Physiology and Biophysics, College of Medicine, University of Vermont

Cardiovascular disease remains the chief cause of mortality and morbidity in adults in many parts of the world, and diagnosis and treatment is increasingly based on cellular, intracellular, and molecular parameters as well as systems analysis. Consequently, it is vital that medical students learn the fundamental physiology of the cardiovascular system. This book, along with its interactive electronic learning modules, breathes life into the subject, with animations, videos, and game-like decision-making.

2nd Edition

**Handbook of Cardiac Electrophysiology**Edited by **Andrea Natale**, **Oussama M. Wazni**, **Kalyanam Shivkumar** and **Frank Marchlinski**

This second edition of a bestseller provides a practical, user-friendly manual guiding the theory and practice of cardiac electrophysiology. The handbook provides the specialist in training with a thorough grounding procedures, and clinical findings for clinicians. It provides a review of the main kinds of arrhythmia with illustrations of typical ECG findings supported where appropriate by correlative imaging. It also details the principal diagnostic and therapeutic procedures include implantation of pacemakers, resynchronization therapy, and ablation techniques.

6th Edition

**Levick's Introduction to Cardiovascular Physiology**Neil Herring, Cardiologist and Associate Professor in Cardiovascular Physiology, University of Oxford, Oxford, UK and **David J. Paterson**, Professor of Cardiovascular Physiology and Head of the Department of Physiology, Anatomy & Genetics, University of Oxford, Oxford, UK

A sound knowledge of cardiovascular physiology is fundamental to understanding cardiovascular disease, exercise performance and may other aspects of human physiology. Cardiovascular physiology is a major component of all undergraduate courses in physiology, biomedical science and medicine, and this popular introduction to the subject is intended primarily for these

students. A key feature of this sixth edition is how state-of-the-art technology is applied to understanding cardiovascular function in health and disease. Thus the text is also well suited to graduate study programmes in medicine and physiological sciences.

## Practical Cardio-Oncology

Edited by **Susan Dent**, Professor of Medicine, University of Ottawa, Canada

This book takes a holistic view of the treatment of cardio-oncology patients, from evaluating those at high risk of developing cardio-toxicity, guidance for monitoring and managing patients during therapy to cardiac care of cancer survivors. Throughout, this book utilizes the latest research and guidance to offer advice on treatment strategy as well as practical elements of such as training, cardio-oncology nursing, patient education and how to establish a cardio-oncology unit. This book focuses on the practical knowledge and skills key to successful collaboration between cardiologists and oncologists to achieve the optimum cardiac care for cancer patients.

## A Notebook of Dermatopathology

Mastering the Basics, Pattern Recognition, and Key Pathologic Findings

Edited by **Mariya Miteva**, Department of Dermatology and Cutaneous Surgery, University of Miami Miller School of Medicine, Miami, FL, USA

There are many detailed texts for dermatopathologists, but what is lacking is a succinct and simple guide to understanding and retaining the basic fundamentals of the subject. In addition to those qualifying in dermatopathology, the specialty is also mandatory for qualified dermatologists in the process of recertification. This resource takes students and qualified professionals through the fundamentals and most common disorders in a visual and tabular fashion. It breaks new ground

in aiding understanding by presenting pattern recognition, findings at each level, and pattern analysis by colour. The text concludes with a "test yourself" section.

## Dermoscopy in General Dermatology

Edited by Aimilios Lallas, Enzo Errichetti and Dimitrios Ioannides

Dermoscopy is now well established as a frontline resource for dermatologists in performing skin cancer screening, so applying dermoscopy as a basic clinical tool in the evaluation of other conditions also was a natural evolution. The dermoscopic patterns of numerous dermatologic diseases have now been investigated and disseminated; this book collects the results, to help all those who want to improve their skills as clinicians and acquire additional knowledge on the submicroscopic morphology of skin diseases.

## 100 Cases in Emergency Medicine and Critical Care, First Edition

**Eamon Shamil**, Specialist Registrar in ENT - Head & Neck Surgery, Guy's and St Thomas' NHS Foundation Trust, London, UK, **Praful Ravi**, Resident in Internal Medicine, Mayo Clinic, Rochester, MN, USA and **Dipak Mistry**, Consultant in Emergency Medicine, University College London Hospital NHS Foundation Trust, London, UK

*Series: 100 Cases*

This new addition to the popular 100 cases series explores common clinical scenarios that will be encountered by the medical student and junior doctor during practical training in the emergency department, in the community and in intensive and critical care settings, and which are likely to feature in qualifying examinations. The book covers a broad range of presentations, organized by sub-specialty area for ease of reference. Comprehensive answers highlight key take home points from each case and provide practical advice on how to deal with the challenges that occur when practising emergency and critical care medicine at all levels.

## Basic Sciences for MCEM

**Chetan Trivedy**, Research Fellow, London School of Emergency Medicine, London, UK, **Matthew Hall**, Specialty Doctor in Emergency Medicine at the Princess Royal University Hospital, Kent, UK and **Harold Ellis**, Emeritus Professor and Clinical Anatomist, Division of Anatomy, St Thomas' School of Medicine, London, UK

Unlike other recent revision books which provide MCQ questions with extended answers, this book uses clinical cases linked to the most recent basic science aspects of the CEM syllabus. It uses common clinical scenarios to highlight the essential underlying basic science principles, providing a link between clinical management and knowledge of the underlying anatomical, physiological, pathological and biochemical processes. This approach makes it a useful revision resource for the Part A component of the MCEM examination, and also a unique way of understanding the processes underlying common clinical cases seen every day in the emergency department.

## General Practice Today

A Practical Guide to Modern Consultations

Jane Wilcock

In recent years there has been a move towards mandatory training on legal aspects, risk scores and guidance. With widespread access to IT there has also been huge growth in the information doctors need to know and manage. Such outside considerations can seem challenging and remote for the time-poor GP sat with their patient; yet in today's reality they have never been more important. *General Practice Today* offers advice on everything from law, technology and time management to mental health issues, ethics, religion and culture, exploring how to determine which issues are relevant to each individual consultation.

## Better Value Health Checks

A Practical Guide

Nick Summerton

This book explores the practical aspects of setting up and assessing the quality of health checks. It is the first book to support clinicians and managers in enhancing the value of health checks in improving health outcomes, an increasingly essential goal for health services. The book will help maximise outcomes for individuals, families and employers by addressing each element within a health check from primary prevention, risk factor reduction and screening to early diagnosis and tertiary prevention. These are considered in relation to their ability to lead to subsequent improvements in individual health outcomes.

## Handbook of Primary Care Ethics

Andrew Papanikitas and John Spicer

With chapters revolving around practical issues and real-world contexts, this Handbook offers much-needed insights into the ethics of primary healthcare. An international set of contributors address a challenging array of topics. These range from the issues arising in primary care interactions, to working with different sources of vulnerability among patients, from contexts connected with teaching and learning, to issues in relation to justice and resources. The book is both interdisciplinary and inter-professional, including not just 'standard' philosophical clinical ethics but also approaches using the humanities, clinical empirical research, management theory and

much else besides.

## Family Practice in the Eastern Mediterranean Region

Universal Health Coverage and Quality Primary Care

Edited by Hassan Salah and Michael Kidd

Series: *WONCA Family Medicine*

This is the first book to analyze in depth the current causes of shortage of family physicians and the relative weakness of the family practice model in many countries in the Eastern Mediterranean Region. Focusing on engagement with the private health sector in scaling up family practice, the book explores why primary health care can make the difference and how it can be introduced and strengthened. Comparative experiences from around the world put the EMR in context, while the book also highlights where the EMR is special – in particular, the burden for health care of refugees and displaced persons, and the need of public-private partnerships.

## How To Do Primary Care Research

Edited by Felicity Goodyear-Smith and Robert Mash, Division of Family Medicine and Primary Care, Stellenbosch University, Faculty of Medicine and Health Sciences, Francie Van Zijl Rd, Tygerberg, Cape Town, Western Cape, South Africa

Series: *WONCA Family Medicine*

This practical 'How To' guide takes the reader step-by-step through designing, conducting and disseminating primary care research, a growing discipline internationally. The majority of health care issues are experienced by people in community settings, who are not adequately represented by hospital-based research. There is therefore a great need to upskill family physicians and other primary care workers and academics to conduct community-based research to inform best practice. Aimed at emerging researchers, including those in developing countries, this book also addresses cutting edge and newly developing research methods, which will be of equal interest to more experienced researchers.

## Respiratory Management in Primary Care

Steve Holmes and Jane Scullion

Respiratory problems are the most common reason for GP consultation and emergency medical admission to a hospital. This book responds to a perceived gap in GP training in respiratory issues, despite the fact that the management of asthma and chronic obstructive pulmonary disease in primary care is a key competence for general practice. The book is wholly practical, incorporating the latest NICE guidelines, MRI images and diagrams, with 'red flags' and key take-away messages. A lack of onus on theory makes it more accessible, focusing on practical advice and processes. This allows not just for diagnosis and treatment, but effective patient management. A key chapter is dedicated to communication between primary and secondary care professionals as the boundaries between GP and nurse functions are increasingly blurring.

## Substance Misuse and Associated Health Problems

Practical Guidance for General Practice

Euan Lawson

This book provides evidence-based, pragmatic and practical guidance for primary care and substance misuse services. Covering the major substances used in the UK, it also considers associated health problems and the needs of some of the most vulnerable groups in our society where substance misuse is a significant contributor. It puts sound advice well within the grasp of all those involved in delivering care in substance misuse settings. Essential reading for anyone who wants to improve the care they deliver to some of the groups in society with the greatest needs.

## The Fifteen Minute Hour

Efficient and Effective Patient-Centered Consultation Skills

Marian R. Stuart and Joseph A. Lieberman

*The Fifteen Minute Hour* remains an established support for primary care practitioners aiming to increase patient satisfaction without adding significantly to the length of a visit. This sixth edition emphasizes a patient-centred approach to help practitioners enhance the therapeutic relationship with their patients. With a renewed focus on wellness and health promotion, the book offers simple and effective techniques to solve or prevent psychological and behavioural problems manifested in the consultation. The Fifteen Minute Hour has become essential reading around the world, and this sixth edition is completely updated with new references substantiating the efficacy of the authors' methods.

## The Inner Physician

Roger Neighbour

In this final volume of his best-selling 'Inner' trilogy, Roger Neighbour explores the relationship between a doctor's professional and private selves. He suggests that the mind of every doctor retains an untrained 'ordinary human being' part - their Inner Physician - which makes an important, though often neglected, contribution to medical practice. This 'Inner Physician', which he also describes as the 'amateur within' or the 'expert minus the expertise', plays a major role in diagnosis and treatment, and is the chief source of insight, empathy and clinical acumen. Roger shows that skilled use of the Inner Physician is one thing that distinguishes the generalist from the specialist.

2nd Edition

**Antifungal Therapy**

Edited by **Mahmoud Ghannoum**, Case Western Reserve University, USA and **John R. Perfect, MD**, Duke University, Medical Center, Durham, North Carolina, USA

This new edition of Antifungal Therapy maintains its goal of providing concise, practical, need-to-know information for busy physicians dealing with fungal infections, such as infectious disease physicians, transplant surgeons, dermatologists, and intensivists, as well as basic scientists and pharmaceutical company researchers interested in the state of antifungal therapy. It provides a comprehensive, up-to-date overview of the pertinent issues pertaining to antifungal treatment including the basics of clinical mycology, management insights for various infections, evidence-based treatment recommendations, and helpful tables summarizing currently available pharmacokinetics data.

Edited by **Jakko van Ingen, MD, PhD**, Radboud University Medical Centre, Dept. of Medical Microbiology, Nijmegen, The Netherlands and **Peter Davies**, Liverpool Heart and Chest Hospital, Thomas Drive, Liverpool, UK

This handbook is designed to provide basic clinical guidance on the diagnosis and treatment of non-tuberculous mycobacteria (NTM) infections. It is a contributed work drawing on the knowledge and experience of global leaders in infectious diseases, microbiology, and respiratory medicine. It is authoritative, concise, and portable, intended for use in a fast-paced clinical setting. Its coverage of both basic science and clinical aspects of NTM, makes it highly useful as a refresher for verifying a specific case or a daily companion for physicians caring for patients with NTM. A first-of-its-kind, it will be the go-to guide for clinicians encountering NTM in practice.

5th Edition

**Basic Clinical Radiobiology**

Edited by **Michael C. Joiner**, Department of Radiation Oncology, Wayne State University, MI, USA and **Albert van der Kogel**, Department of Human Oncology, University of Wisconsin School of Medicine and Public Health, Madison, WI, USA

Concise but comprehensive, this textbook sets out the essential science, basic principles, clinical application, and significant developments in radiobiology for those seeking accreditation in radiation oncology, clinical radiation physics, and radiation technology. This new edition is highly illustrated and now includes chapters on stem cells, tissue response, and the

convergence of radiotherapy, radiobiology, and physics. It will be invaluable for FRCR (clinical oncology) and equivalent candidates, SpRs (and equivalent) in radiation oncology, practicing radiation oncologists and radiotherapists, radiobiologists, and radiotherapy physicists.

2nd Edition

**Clinical Haematology**

Illustrated Clinical Cases

**Atul Bhanu Mehta**, Consultant Haematologist, Royal Free Hospital, London, UK and **Keith Gomez**, Royal Free Hampstead N H S Trust, London, UK

*Series: Illustrated Clinical Cases*

This fully illustrated text is an essential guide for trainees in Haematology and Medicine studying for higher examinations, as well as for professionals wishing to expand their knowledge or revalidate.

The book contains over 100 illustrated cases covering the whole field of malignant and non-malignant haematology, including coagulation problems and infectious diseases. Each case contains

a set of questions written by two Royal College examiners, with answers on the reverse page. Readers can make differential diagnoses and devise treatment plans and prognoses, before turning the page to read the experts' detailed answers.

## Handbook of Refugee Health

Edited by Ibrahim Abubakar, Alimuddin Zumla, Miriam Orcutt, Alison Lievesley, Aula Abbara, Sophie North, Clare Shortall and Sarah Walpole

The number of refugees and other forced migrants is at its highest ever recorded level. As reasons for displacement change, so too do the conditions and diseases that patients present with. This handbook helps practitioners provide the highest level of care to refugees in a variety of contexts, covering clinical medicine, public health and cultural competency. The chapters draw on existing frameworks and evidence to bridge the current gap and increase the confidence and ability of healthcare professionals working with these populations.

## Asthma, COPD, and Overlap

A Case-Based Overview of Similarities and Differences

Edited by **Jonathan A. Bernstein**, University of Cincinnati, Cincinnati, Ohio, USA, **Louis-Philippe Boulet** and **Michael E. Wechsler, MD,MMSc**, National Jewish Health, Denver, Colorado, USA

Using illustrative case examples, this book thoroughly reviews similarities and differences between asthma, chronic obstructive pulmonary disease (COPD) and the overlap syndrome. It is important to highlight the distinctions because these commonly encountered conditions in respiratory and primary care share many similarities but have important differences often mistaken for each other. This can have serious implications for treatment

particularly as new treatments are targeted at specific phenotypes of the diseases. This practical guide shows how to distinguish between the diseases on a pathological and clinical basis so that appropriate management and treatment may be pursued.

2nd Edition

## Non-Invasive Ventilation and Weaning

Principles and Practice

Edited by **Mark Elliott**, MA MB, BChir, MD, FRCP(UK) Department of Respiratory Medicine, St James's University Hospital, Leeds, UK, **Stefano Nava**, University of Bologna, Italy and **Bernd Schönhofer**, Klinikum Region Hannover, Germany

This 2nd edition continues to be the most comprehensive resource available on non-invasive ventilation (NIV) both in the hospital and at home. Global experts cover NIV use in acute and chronic respiratory failure, plus paediatric and other specialty applications. Disease-specific sections provide best practices on the science, diagnostics and management for conditions such as COPD, cardiac failure, neuromuscular disease and obesity. Features such as Common Clinical Questions and Answers and clinical vignettes showcase realities of NIV in practice. Concise summaries of each chapter, plus abundant tables and illustrations, facilitate rapid access to the wealth of information presented.

**A Beginner's Guide to Intensive Care**

A Handbook for Junior Doctors and Allied Professionals

Edited by **Nitin Arora** and **Shondipon K. Laha**, Lancashire Teaching Hospitals NHS Foundation Trust, Sharoe Green Lane North, Preston, PR2 9HT, UK

Ideal for any medic or health professional embarking upon an intensive care rotation or specialism, this simple bedside handbook provides handy, pragmatic guidance to the day-to-day fundamentals of working in an intensive care unit, often a daunting prospect for the junior doctor, nurse and allied health professional encountering this challenging environment for the first time. Thoroughly updated, new topics added include sepsis, ARDS, refractory hypoxia, the role of allied health professionals, post ICU syndrome and follow up, and consent and capacity including new DOLS guidance. The book is authored by

world-renowned contributors and edited by established consultants in the field.

2nd Edition

**Primary FRCA in a Box**

Sarah Armstrong, Barry Clifton and Lionel Davis

*Primary FRCA in a Box*, 2nd edition, contains over 200 revision flashcards addressing all the topics needed to pass the Primary FRCA. The key subject areas of physiology, pharmacology, physics, and anatomy are covered in easy-to-learn note format. Illustrations aid understanding making this particularly suited to the viva examination. Using standard question formats from the Royal College exams, *Primary FRCA in a Box* is an essential tool for effective revision and preparation for the Primary FRCA exams. Recommended for all qualified and trainee anaesthetists and their trainers, and related health professionals.

An Introductory Guide

Edited by **Cristina Camprubi** and **Joan Blanco**

Epigenetics is the study of how certain genes are activated without modification at the DNA sequence level, resulting in genetically similar individuals having different clinical outcomes. As contemporary medicine increasingly aims to personalize the medical approach to a patient's genetic profile, the factors that can affect which genes are expressed also increase in importance and relevance to the clinician. This text from experts will give the clinician in Reproductive Medicine a reliable grounding in current thinking and research on this fast-moving topic, with many clinical implications.

Early Warnings and Rapid Responses in Maternal Medical Care

Edited by **Lauren A. Plante**, Drexel University College of Medicine, Dept. of Obstetrics & Gynecology, Philadelphia, Pennsylvania, USA

Many institutions have adopted a maternal early warning system in order to identify women at risk of significant morbidity. Once a warning sign is identified, however, a quick response is indicated to keep the patient's condition from deteriorating. This book is designed as a practical resource to help the medical professional address these situations. Decision algorithms and summary boxes are featured prominently throughout for convenience, so emergency management decisions can be accessed easily and clearly.

2nd Edition

**Get Through MRCOG Part 3**

Clinical Assessment

**Justin T. Clark, Arri Coomarasamy, Justin Chu and Paul Smith**

Series: *Get Through*

This study guide offers a systematic, comprehensive and focused approach to preparation for the MRCOG Part 3 Clinical Assessment exam. After an initial introduction, the text divides by OSCE station, beginning with an analysis of what the station is testing and what approaches and preparation are required, supported by tips and examples; this is followed by thoroughly worked practice questions based upon the exam format, with an analysis of how these are likely to be marked. Practice exam 'circuits' with fully worked questions and answers conclude the book.

## Handbook of New Genetic Diagnostic Technologies in Reproductive Medicine

Improving Patient Success Rates and Infant Health

Edited by **Carlos Simón**, Instituto Valenciano de Infertilidad, Spain and **Carmen Rubio**, Igenomix, FIVI/INCLIVA, Paterna, Valencia, Spain

Different genetic diagnostic and treatment options are used worldwide that complement the routine IVF procedures for the benefit of patients. This handbook updates the new genetic diagnostic technologies that have been translated to the clinic, improving efficiency in terms of implantation, pregnancy, and miscarriage rates, as well as helping to achieve a healthy baby. The contents cover use of genetic technologies in the couple wishing to conceive, on the sperm, embryo, endometrium, product of conceptions in the miscarriages, and finally the fetus,

in an individualized manner.

## Practical Manual of Minimally Invasive Gynecologic and Robotic Surgery

A Clinical Cook Book

Edited by **Resad Paya Pasic**, Department of Obstetrics & Gynecology, University of Louisville School of Medicine, KY, USA and **Andrew I. Brill**, Department of Minimally Invasive Gynecology, California Pacific Medical Center, San Francisco, CA, USA

This third edition has been extensively updated to provide the gynecologic surgeon with a state-of-the-art and practical resource that can be used to review or learn about commonly performed surgical procedures in minimally invasive gynecology. To meet the needs of both novice and experienced surgeons, the text is engineered to cover the clinical decision-making, key

instrumentation, and technical cascade for each surgical procedure.

## Reconstructive and Reproductive Surgery in Gynecology

Two Volume Set

Edited by **Malcolm G. Munro**, David Geffen School of Medicine at UCLA, Los Angeles, California, USA and **Victor Gomel**, University of British Columbia, Vancouver, Canada

This new edition of a groundbreaking book is now in two volumes, on 'Fundamentals, Symptoms, and Conditions' on 'Reconstructive and Fertility Preserving Surgery and Procedures'. From a distinguished editorial team and internationally recognized contributors the text educates surgeons on the techniques and procedures now needed in gynecology, with a special focus on reconstructive vaginal, hysteroscopic, laparoscopic, and laparotomic surgery, including that designed to preserve or enhance fertility. The reader can now more readily understand pathogenesis, appropriate investigation, and application of both surgical and nonsurgical strategies and techniques.

## Spermatogenesis

Biology and Clinical Implications

Edited by **C. Yan Cheng**, Center for Biomedical Research, New York, USA

Senior investigators internationally have here collaborated to produce an international reference work. Each contributor provides critical and thought provoking concepts and ideas based on the latest developments in their field. The result is a must read and timely reference work for investigators who are interested in how spermatogenesis is currently understood and which are the most promising avenues for future research; an Introduction sets the context for the chapter and points out the relevance of the research for basic research scientists and

clinicians.

5th Edition

## Textbook of Assisted Reproductive Techniques, Two Volume Set

Edited by **David K. Gardner**, University of Melbourne, Australia, **Ariel Weissman**, Edith Wolfson Medical Center, Holon, Israel, **Colin M. Howles**, Aries Consulting, Geneva, Switzerland and **Zeev Shoham**, Kaplan Medical Center, Rehovot, Israel

Already established as a classic comprehensive reference for the whole team at the IVF clinic, this new edition has been extensively revised, with the addition of several important new contributions on laboratory (including advanced sperm selection techniques for ICSI, human embryo biopsy procedures, oocyte activation, managing an oocyte bank, artificial gametes, and epigenetics) as well as on clinical topics (including GnRH agonist triggering, segmentation of IVF treatment, uterus transplantation,

and risk and safety management). As previously, methods, protocols, and techniques of choice are presented by eminent contributors internationally.

## Ultrasound Assessment in Gynecologic Oncology

**Juan Luis Alcázar**, Full Professor of Obstetrics and Gynecology, School of Medicine, University of Navarra, Pamplona, Spain

This innovative guide will help gynecologists or gynecologic surgeons to monitor the staging and progress of oncology treatment. An international expert here shows what office ultrasound can be used to achieve, how it correlates with other clinical findings, and how it can be integrated as necessary with other modalities and with the latest technological advances and developments in the field.

## Clark's Essential PACS, RIS and Imaging Informatics

Alexander Peck, VP Informatics, UK Radiological Congress Informatics Advisory Group; Society & College of Radiographers; External Lecturer, City University; Radiographer, London NW Healthcare NHS Trust, UK  
*Series: Clark's Companion Essential Guides*

Imaging informatics is a complex and historically rapidly changing field, knowledge of which is central to the practice of all imaging specialists. This convenient pocket guide provides the foundations of knowledge in informatics, allowing radiographers in training and in practice, assistant practitioners and other allied health professionals to understand, use and develop more efficient ways of imaging that will in turn deliver improved patient care.

3rd Edition

## Diagnostic Ultrasound, Third Edition

Physics and Equipment

Edited by Peter R Hoskins, Edinburgh University, Edinburgh, UK, Kevin Martin and Abigail Thrush

The book provides an introduction to the physics and technology of medical ultrasound. The book is written with a clinical readership in mind. For the second edition the field had moved on quite a lot in the 7 years since the first edition. Consequently the second edition contained several new chapters (3D, contrast agents, elastography); the safety chapter had an extensive rewrite; there was more minor updating of other chapters. Technology has not moved on to the same extent in the 6 years since the second edition was submitted. The same chapter structure would still be used, with updates for each chapter.

## Pediatric Radiology

An A-Z Review

Randy R. Richardson, St. Joseph's Hospital and Medical Center, Phoenix, Arizona, USA and Courtney Mitchell, St. Joseph's Hospital and Medical Center, Phoenix, Arizona, USA

This text is a comprehensive review of pediatric radiology. It is a primary reference and board review for radiology residents studying for the Core Examination or In-Service Training Exam. The extensive review of pediatric radiology topics is also instructive for fellows studying for the CAQ. Additionally, it will serve as a refresher and review for practicing general and pediatric radiologists preparing for recertification.

2nd Edition

## Practical Head and Neck Ultrasound, Second Edition

Edited by Anil T. Ahuja, Rhodri M. Evans and Timothy Beale, University College Hospital and Royal National Throat, Nose and Ear Hospital

This is a practical guide for those who want to learn and develop skills in head and neck ultrasound, in particular radiologists, sonographers, surgeons, and endocrinologists. The format has worked well to date and there has been a growing need to have competent individuals suitably trained to undertake high quality diagnostic ultrasound as well as appropriate interventions. This second edition provides a much-needed update including more images, current references, and new techniques.

## 50 Landmark Papers Every Spine Surgeon Should Know

Edited by **Alexander R. Vaccaro, MD, PhD, MBA, Jefferson R. Wilson, MD** and **Charles G. Fisher, MD, MHSc, FRCSC**,

This book identifies the 50 key scientific articles in the field of spine surgery, provides commentary from the studies' original authors, and explains why it is important to know them via expert reflections and editorial perspectives. Identifying those influential contributors who have shaped the practice of modern spine surgery, the book covers trauma, degenerative, tumors, deformity, pediatric and the surgical techniques. A short bibliography is added to each review, serving as a springboard for further inquiry. This is an invaluable reference for residents, fellows, and surgeons studying for boards, as well as for

seasoned surgeons who want to stay current in the field.

## Fluid Therapy for the Surgical Patient

Edited by **Christer H. Svensen**, Karolinska Institutet, Stockholm, Sweden, **Donald S. Prough**, University of Texas Medical Branch, Galveston, USA, **Liane Feldman**, McGill University, Department of Surgery, Montreal, Quebec, Canada and **TJ Gan**, Stony Brook University, New York, USA

Over the past decade, there have been a large number of important studies related to fluid management for the surgical patient, resulting in confusion on this critical aspect of patient care. Proper fluid therapy in the perioperative setting has always been important but, only recently have we really had concrete outcome-based guidelines. There is currently no good summary book available. This text addresses that need.

## History of Surgery

**Harold Ellis**, Professor, Applied Clinical Anatomy Group, Applied Biomedical Research, Guy's Hospital London, UK

Written in a personal and engaging style, by a medical author and teacher of great renown, this book provides a fascinating and informative introduction to the development of surgery through the ages. It describes the key advances in surgery through the ages, from primitive techniques such as trepanning, some of the gruesome but occasionally successful methods employed by the ancient civilisations, the increasingly sophisticated techniques of the Greeks and Romans, the advances of the Dark Ages and the Renaissance and on to the early pioneers of anaesthesia and antiseptics such as Morton, Lister and Pasteur. Fully illustrated in colour, Ellis's History of Surgery is the only serious choice for a reader wanting a lively and informative single-volume introduction to surgical history.

## Oncoplastic and Reconstructive Surgery of the Breast

Edited by **Steven J. Kronowitz, MD, FACS**, **John Russell Benson**, Addenbrooke's Hospital, Cambridge, UK and **Maurizio Bruno Nava**, Instituto Nazionale Tumori, Milan, Italy

Building on the success of previous editions, a comprehensive and contemporary account of techniques in oncoplastic and reconstructive breast surgery is described and illustrated. Presenting a detailed description of implant design and technology with accounts of implant-only-based and autologous tissue reconstruction. Emphasis is placed on patient selection, which is critical for optimum cosmetic and functional results. Further topics include psychological issues, patient expectation, specific contraindications to reconstruction and chronic pain following surgery.

**Take Charge! General Surgery and Urology**

Alexander Trevatt, Barnet Hospital, Royal Free NHS London Trust, UK, Richard Boulton, Barnet Hospital, Royal Free NHS London Trust, UK and Daren Francis, Barnet Hospital, Royal Free NHS London Trust, UK

As a junior doctor starting a surgery or urology rotation, you are expected to take charge of referrals from - and give specialist advice to - A&E, GPs and other specialties. Often you will have had very limited surgical experience and only an off-site registrar for support. This pocket-sized book provides a quick, reliable reference guide for the initial management of the common surgical referrals, with guidance as to what complaints require admission and which can be sent home for outpatient or GP follow-up. It will help relieve the stressful experience of being on-call, alleviating some of the anxiety and making shifts more bearable.

## Viva Practice for the FRCS(Urol) and Postgraduate Urology Examinations

Manit Arya, Iqbal Shergill, Herman Fernando, Jas Kalsi, Asif Muneer and Hashim Ahmed

Series: *MasterPass*

This is the first revision book to be published specifically for FRCS(Urol) candidates. It provides a selection of common clinical scenarios together with a guide to answering the FRCS(Urol) questions. Each chapter is written by Consultant Urological Surgeons or senior Urology trainees who have passed the examination. This second edition responds to continual changes in practice and emergence of new evidence in NICE, EAU and AUA guidelines. There are substantial revisions to paediatric and female urology, urinary stone disease, benign prostatic

hyperplasia and uro-technology to meet standards of current best practice, plus a new chapter on the TNM classification of urological cancers.

## Improving Outcomes in Colon & Rectal Surgery

Edited by David A. Margolin, Brian R. Kann, Ochsner Medical Center, Dept of Colon & Rectal Surgery, 1514 Jefferson Highway, New Orleans, LA 70121, USA, Charles B. Whitlow, H. David Vargas, MD, FACS, FASCRS and David E. Beck, Ochsner Clinic Foundation, 1514 Jefferson Highway, New Orleans, LA 70121, USA

This evidence based book provides a modern resource for improving outcomes in colorectal surgery. The occurrence or mismanagement of complications often results in poor outcomes, increased cost, and significant morbidity. Answering the call for transparency and improvement requires action and co-operation by all involved in the care of patients.

This text presents the current knowledge of outcomes, as well as the techniques for minimizing and managing complications from the common diseases and procedures of this specialty. This information will aid providers in optimizing care and encourage research in outcome and quality measurement.

## Operative Endoscopic and Minimally Invasive Surgery

Daniel B. Jones, MD, professor of surgery at Harvard Medical School, vice chair of surgery in the Office of Technology and Innovation, and chief of Minimally Invasive Surgical Services at the Beth Israel Deaconess Medical Center, Boston, Massachusetts, USA and Steven D. Schwartzberg, MD, is chief of Surgery in the Department of Surgery at the Cambridge Health Alliance and an Associate Professor of Surgery at Harvard Medical School, Boston, Massachusetts, USA

This is a new reference edited by two leading authorities in the field of minimally invasive surgery that differentiates itself from other similar titles by providing a stronger emphasis on incorporating newer technologies. The book discussed the incorporation of flexible endoscopy into surgical practice, harvesting the expertise of gastroenterologists and surgical endoscopists. It also discusses minimally invasive operative procedures such as laparoscopically assisted vaginal hysterectomy.

## Atlas of Advanced Shoulder Arthroscopy

Edited by **Andreas B. Imhoff**, Technical University of Munich, Germany, **Jonathan B. Ticker**, Columbia University, College of Physicians and Surgeons, New York, New York, USA, **Augustus D. Mazzocca**, UConn Health, Department of Orthopaedic Surgery, Farmington, Connecticut, USA and **Andreas Voss**, Technical University of Munich, Germany

Arthroscopic surgery has been one of the biggest Orthopedic advances in the last century. It affects people of all ages. Total joint replacement may capture popular imagination, but arthroscopy continues to have a greater effect on more people. This Atlas provides the most up to date resource of advanced

arthroscopic techniques, as well as including all the standard procedures. Beautifully illustrated and supported by online videos of the latest techniques, this Atlas will appeal to both experienced shoulder surgeons as well as the orthopedic surgeon seeking to enhance his or her knowledge of shoulder arthroscopy.

## Military Medicine in Iraq and Afghanistan

A Comprehensive Review

Edited by **Ian Greaves**, Visiting Professor of Emergency Medicine, University of Teeside, and Consultant in Emergency Medicine, British Army

This detailed review of the *United Kingdom Defence Medical Services* on deployment in Iraq and Afghanistan describes the challenges, failures and achievements in delivering effective care to defence personnel. The field of trauma is best known for improvements in patient care, but specialties such as transfusion medicine, rehabilitation and mental health have seen significant developments. It is often the fields of internal medicine, primary care and blast protection that have preserved fighting strength, thus enabling deployment of an

effective force. The care provided for casualties has been a joint effort of clinicians, scientists, logisticians and commanders, empowered at least in part by the public profile of injury and mortality rates.

## Trauma Care Pre-Hospital Manual

Edited by **Ian Greaves**, Visiting Professor of Emergency Medicine, University of Teeside, and Consultant in Emergency Medicine, British Army, **Keith Porter** and **Chris Wright**, St Mary's Hospital, Emergency Department, Paddington, London, UK

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK).

The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

## Trauma: Code Red

Companion to the Definitive Surgery Trauma Skills Course

Edited by **Mansoor Ali Khan** and **Morgan McMonagle**

The Royal College of Surgeons' of England two-day "definitive surgical trauma skills course" is run by the authors. The course began in 1997 but a new syllabus has recently been put in place. The focus is on thoracic, abdominal and vascular injuries, caused by both penetrating trauma, such as a knife, and ballistic trauma caused by guns. This Manual accompanies the course and its aim is to "demystify the body" and show how to control massive blood loss. Interventions, whether they be military or civilian, are described in full, and techniques derived from the battlefield and world-wide hotspots in trauma — are exemplified within this book.

## Oral and Oropharyngeal Cancer

Edited by **Jatin P. Shah, MD, FACS**, Memorial Sloan Kettering Cancer Center, New York, USA and **Newell W. Johnson, CMG, FMedSci MDS**, Griffith Health Institute, Queensland, Australia

The prevalence of Oral and Oropharyngeal Cancer continues to rise worldwide, related to the increase in consumption of tobacco, alcohol and other carcinogenic products. However, there has also been a significant reduction in mortality due to increasing awareness, early diagnosis and advances in treatments. This second edition of a bestseller reviews every aspect of the diagnosis and treatment of the orofacial cancer

patient. As with the first edition, the book is organized in three parts, covering Pathology and Biology, Clinical Management, and Outcomes and Follow-up.

## Case Studies in Pediatric Surgery

Sherif Emil

This book targets pediatric surgical residents and fellows and complements the classic textbooks in the field by taking the knowledge base and applying it to practical clinical scenarios. The format replicates the typical clinical scenarios encountered by pediatric surgeons. A short synopsis of a case is presented, frequently with photographs. The reader then goes through a series of questions regarding further clinical information, appropriate imaging, management, and expectations on pathology, enabling the reader to work through the case.

## The Kelalis--King--Belman Textbook of Clinical Pediatric Urology

Edited by **Steven G. Docimo**, **Douglas Canning**, **Antoine Khoury** and **Joao Luiz Pippi Salle**

This book presents state-of-the-art knowledge and common-sense practice in all areas of clinical pediatric urology. Clinical in orientation and practical in presentation, every disorder and disease, diagnostic method, and appropriate treatment in pediatric urology from the embryo onwards is included.

Widely acknowledged as the leading reference in the field, the book is essential reading for practitioners who deal with urological disorders of childhood, whether trainees, residents or experienced specialists. An additional feature is the

inclusion of high-quality operative videos, integrated in the accompanying eBook, allowing the reader to visualize the key procedures described in the text.

**Endovascular Skills**

Guidewire and Catheter Skills for Endovascular Surgery

**Peter Schneider**, Division of Vascular Therapy, Kaiser Foundation Hospital, Honolulu, Hawaii, USA

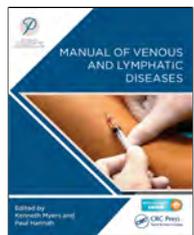

Since the first edition of this text was published, endovascular technique has become a mainstay of vascular care, treating disease that would have previously required open surgery. This book provides a step-by-step approach to endovascular intervention and aims to assist clinicians in the development and refinement of skills that are now essential to modern vascular practice. It begins with an overview of vascular access, guidewire-catheter handling, and arteriography in a multitude of vascular beds. It then discusses endovascular therapy, including sheath access, balloon angioplasty, stents, and other treatment modalities.

## Practical Management and Leadership for Doctors

John Wattis, University of Huddersfield, Huddersfield, UK, Stephen Curran, University of Huddersfield, Huddersfield, UK and Elizabeth Cotton, Senior Lecturer Middlesex University Business School, UK

This practical, concise book will help every medical manager survive and thrive in the increasingly challenging world of healthcare. It offers a hands-on introduction to the knowledge, skills, attitudes and behaviour required to succeed in a modern healthcare setting. Focussing on common issues and challenges, the authors examine organisational structures and strategies for productive relationship-building, goal-setting and quality maintenance. This edition updates every chapter, while three new chapters focus on encouraging innovation, how to lead

and manage in difficult circumstances, and the major developments in the professionalization of medical management and leadership.

## Putting Social Media To Work in Healthcare

A Beginner's Guide to Digital Success

Kevin R Campbell

This is the first practical textbook for healthcare professionals demonstrating how to use social media in medicine. It focuses on the very basics of social media, providing a step-by-step approach for creating a social media presence and guiding you through the process of setting up individual accounts on multiple social media platforms. The book will help you create a social media strategy and develop a consistent, effective online presence. In addition, it addresses important ethical and regulatory considerations for social media use by healthcare professionals, while real world examples show how social media engagement can improve health outcomes.

## Writing High-Quality Medical Publications

A User's Manual

Stephen W Gutkin, Rete Biomedical Communications Corp., Wyckoff, New Jersey and Independent Medical Publications Consultant, Wilmington, North Carolina, USA

The imperative to "publish and not perish" has never been more compelling. Yet millions of manuscripts are prepared each year without a clear path to publication by a peer-reviewed medical journal. Drawing from the author's distinguished, nearly 30-year career, this comprehensive and supportive guide helps to get your paper accepted—and by the journal of first choice.

Elucidating pivotal principles of quality, and biostatistics, and informed by the belief that your writing can be engaging, elegant, and memorable—no matter how technical and complex the subject matter, this volume can be your trustworthy

companion as you seek to enhance both the structure and substance of your manuscripts.

## Writing to Improve Healthcare

An Author's Guide to Scholarly Publication

David P. Stevens, The Dartmouth Institute for Health Policy and Clinical Practice, Lebanon, NH, USA

This new book is a 'what and how to' guide to writing for successful scholarly publication in the emerging fields of healthcare improvement and patient safety. While there are many useful authors' aids for scholarly biomedical publication, none focuses explicitly on these relatively new fields. It offers practical advice that includes preparation and organization of a scholarly healthcare improvement manuscript, where to submit it to find the most likely interested editor and journal, how to take full advantage of coauthors' working together effectively, and strategies for authors to reach a broader health professions readership.

## An Atlas of Small Animal Ocular Surgery

Edited by **Rick F Sanchez**, Royal Veterinary College, Queen Mother Hospital for Animals, North Mymms, Hertfordshire, United Kingdom and **David Gould**, Davies Veterinary Specialists, Hitchin, Hertfordshire, United Kingdom

There is a gap in the market for a book on small animal ophthalmic surgery that is heavily illustrated with the use of step-by-step color images. This book fills that gap. The atlas format, that has accompanying text as secondary support including possible complications, will support the visual learner as much as the more abstract thinker, while delivering its general educational aims to a wide audience - general practitioners to developing specialists all around the world as well as residents in training.

## Canine Infectious Diseases

Self-Assessment Color Review

Edited by **Katrin Hartmann** and **Jane Sykes**

*Series: Veterinary Self-Assessment Color Review Series*

This book covers all types of canine infectious diseases, including infections caused by viruses, bacteria, parasites and fungi. Over 200 clinical cases are presented randomly, as in practice, and cover the range of infectious diseases which affect all the organ systems of the dog. Featuring international expert contributors, the illustrated cases contain integrated questions and detailed explanatory answers.

## Canine Medicine

Self-Assessment Color Review

**Paolo Silvestrini**, School of Veterinary Science, University of Liverpool, UK, **Daniel Batchelor**, **Kevin Murtagh** and **Martina Piviani**

*Series: Veterinary Self-Assessment Color Review Series*

This new edition in the Self-Assessment Color Review series contains approximately 200 all-new color illustrated cases in random order, as they would be presented in practice. Questions are based on each case with answers that fully explore the disease/disorder in question. The book will be useful both to candidates preparing for examinations and to practitioners in their continuing education.

## CRC Handbook of Marine Mammal Medicine

Edited by **Frances M.D. Gulland**, Marine Mammal Center, Sausalito, California, USA, **Leslie A. Dierauf**, Seattle, Washington, USA and **Karyl L. Whitman**

The new edition of the CRC Handbook of Marine Mammal Medicine provides a thorough and international approach to the husbandry, diseases, and environmental and political issues relating to marine mammal health and well-being. It covers all aspects of disease and health in cetaceans, pinnipeds, manatees, sea otters, and polar bears. In addition to the documented data on anatomy, physiology, infectious diseases, surgery, pathology, diagnostic imaging, and tagging and tracking, there are sections on marine mammals as sentinels of ocean health, strandings and rehabilitation, emerging diseases and public health considerations, legislative and regulatory issues, and careers in the field.

## Diagnostic MRI in Dogs and Cats

Edited by **Wilfried Mai**, University of Pennsylvania, School of Veterinary Medicine (Radiology), Philadelphia, USA

This is the first reference textbook to make the vast, increasingly complex topic of clinical MRI in small animals accessible to all veterinarians. It provides a well-illustrated, comprehensive overview of the current knowledge, focusing on imaging appearance rather than on clinical signs or treatment. With chapters on MRI physics and technology as well as sections on specific anatomical regions, the book functions as a stand-alone reference for the reader, whether they be a radiology/neurology resident in training or a practitioner with a need to learn about veterinary clinical MRI. Each chapter is authored by

internationally-renowned experts in the specific area of veterinary radiology.

## Equine Anesthesia and Pain Management

A Color Handbook

Edited by **Jane Quandt**, University of Georgia, Athens, USA and **Michele Barletta**, University of Georgia, Athens, USA

Series: *Veterinary Color Handbook Series*

Equine Anesthesia and Pain Management: A Color Handbook is a concise and quick reference guide, clinically oriented, based on experience underpinned by published research data. The book covers anesthetic equipment, pre-anesthesia evaluation, premedication and physical restraint, induction, total intravenous anesthesia, inhalant anesthesia and partial intravenous anesthesia, monitoring, fluid therapy, recovery, complications, specific diseases or procedures, pain management, alternative analgesic techniques, anesthesia and sedation for the donkey/mule and miniature horse, CPR and euthanasia. The book contains a wealth of superb illustrations.

## Equine Pediatric Medicine

Edited by **William V. Bernard**, Lexington Equine Surgery and Sports Medicine, Lexington, KY, USA and **Bonnie S. Barr**, Rood and Riddle Equine Hospital, Lexington, Kentucky, USA

This systematic yet concise guide to equine pediatric medicine covers etiology, pathophysiology, clinical presentation, differential diagnosis, and management. After a thorough explanation of the physical examination, the chapters then take the reader through the different disorders associated with each body system. A brand new chapter covers nutrition. Superbly illustrated with photographs, diagrams, radiographs and tables, a new section of in-depth case studies brings the information to

life. Equine practitioners will value this as a ready reference, while veterinary students and technicians can use it as a complete guide to equine pediatric disease.

## Essentials of Clinical Anatomy of the Equine Locomotor System

**Jean-Marie Denoix**, CIRALE-Hippolia, Goustranville, France

Essentials in Anatomy of the Equine Locomotor System presents a unique photographic record of dissections showing the topographical anatomy of the locomotor system of the horse. Readers of this book will be able to see the position and relationships of the bones, muscles, nerves, blood vessels and viscera that go to make up each region of the forelimb, vertebral column and hindlimb.

## Fascial Anatomy of the Equine Forelimb

**Carla M. Lusi and Helen M.S. Davies**

The first of its kind in equine anatomy, this clear, concise anatomical guide illustrates the fascial (soft connective tissue) connections of the equine forelimb. Based on dissections of fresh equine cadaver limbs, it provides a visual map for equine physical therapists, veterinarians and horse riders, helping them to understand how pathologies, injuries, or movement abnormalities of the equine forelimb arise and/or progress from one area of the limb to another. Key points in each chapter highlight everyday situations in which knowledge of the fascial system may assist in understanding horse movement and injury.

## Fish Medicine and Surgery

Edited by **Stephen A. Smith**, Virginia-Maryland College of Veterinary Medicine, USA

This new book provides a succinct but comprehensive text that includes an overview of fish medicine and diseases/disorders of tropical, ornamental, bait and food fish from the freshwater, brackish and marine environments. The text also includes problems affecting fish in various regions of the world. The book is organized by body systems, which is the approach that is more consistent with how a practitioner works up a diseased animal. The contributors from around the world bring an international perspective of the various global fish diseases/disorders of importance to the book. This broadens the scope and acceptance of the book for an international audience.

## Goat Medicine and Surgery

David Harwood, BVetMed, FRCVS Chairman, GVS; Hon Vet Surgeon, BGS; Visiting Reader in Vet Field Pathology, Dept of Pathology and Infectious Diseases, School of Vet Medicine, University of Surrey. and Karin Mueller, MVSc DCHP DipECBHM MRCVS Senior Lecturer, Institute of Veterinary Science, University of Liverpool; RCVS and European Diplomat & Specialist in Cattle / Bovine Health

Goat Medicine and Surgery describes key diseases encountered in general practice along with their diagnoses, treatment, prognoses, and control. The book is divided into chapters covering each body system. Diseases and disorders are included with the common differential diagnoses followed by the specific

diagnosis and recommended treatment(s). In addition the book covers basic anatomy, commons breeds, and husbandry. The book will be invaluable to veterinarians in practice and training, animal scientists and agricultural advisors, and scientists interested in animal welfare.

## Obesity in the Dog and Cat

Edited by Martha G. Cline, Red Bank Veterinary Hospital, Tinton Falls, New Jersey, USA and Maryanne Murphy, Red Bank Veterinary Hospital, New Jersey, USA

A complete, balanced diet is one of the fundamental aspects to optimizing health and longevity in companion animals, yet obesity in dogs and cats is becoming a major problem. This book provides a comprehensive review of obesity in small animal medicine with clinical application to veterinarians seeking to provide weight management services in practice. With multiple authors from both academic and practice backgrounds, the chapters cover topics ranging from epidemiology and pathophysiology of obesity to evaluation of body composition, and nutritional and behavioural management, as well as role of exercise and drugs in managing obesity. Case studies demonstrate these topics in practice.

## Ophthalmic Disease in Veterinary Medicine

Edited by Charles L. Martin, University of Georgia, Athens, USA, J. Phillip Pickett and Bernhard M. Spiess

Featuring a new author team, this seminal book has been completely updated and significantly expanded. Following an outline of the basic elements of ophthalmic science relevant to study and practice, the authors provide a detailed description and discussion of each condition including aetiology, clinical signs, diagnosis, prognosis, and therapy, as well as a section dedicated to presumed inherited eye disorders. The focus throughout remains on the clinical needs of the practitioner and the student.

## Pig Health

John Carr, Shih-Ping Chen, Joseph F. Connor, Carthage Veterinary Services Ltd., Illinois, USA, Roy Kirkwood and Joaquim Segalés, Autonomous University of Barcelona, Spain

Maintaining the health of pigs is vital in pig farming and production. This new book written by experts from around the world focuses on the health of pigs, first with coverage of the diseases organized by body system and then with coverage of health maintenance. The book includes over 1,500 high-quality illustrations which, where appropriate, enhance the clinical description. Clinical examination of the individual pig and groups are covered along with environmental medicine.

## Pocket Handbook of Small Animal Medicine

Dr Kit Sturgess, Vet Freedom Ltd, Brockenhurst, Hampshire, United Kingdom

Concise, problem-oriented, and accessibly designed, the Pocket Handbook of Small Animal Medicine 2nd Edition focuses on the essentials of medicine and surgery options of the dog and cat. The book helps start the process of case management and resolution. It includes tips and hints on interpretation of physical signs, diagnostic tests, and management of common presenting conditions. The book presents algorithms used to assist decision-making, specifically in clinical presentations and critical care. The new edition will be completely updated and contain three important new sections: Guide to Common Procedures, Client Communication and Professional Conduct and Therapeutics.

## Practical Computed Tomography (CT) Guide for the Small Animal Orthopaedic- and Neurosurgeon

Edited by Ingrid Gielen, Ghent University, Merelbeke, Belgium and Henri van Bree, Ghent University, Merelbeke, Belgium

More clinics and large practices are investing in CT equipment, meaning veterinary surgeons are often confronted with unfamiliar technical challenges like positioning and handling of the equipment. Even after obtaining the CT images, the interpretation can often be confusing when surgeons are not used to reading axial and transverse images. This book will provide much needed support in choosing the right equipment, providing the exact protocol and finally coming to a diagnosis.

2nd Edition

**Small Animal Medicine and Metabolic Diseases,**

Self-Assessment Color Review

Edited by **Craig Ruaux**, College of Veterinary Medicine, Magruder Hall, Oregon State University, USA

Series: *Veterinary Self-Assessment Color Review Series*

This new edition covers all aspects of diseases and disorders and affecting organs of the abdominal cavity and the endocrine/metabolic system in a case-based format. It brings together a wide variety of new cases, the majority of which are "classical internal medicine". The remainder are respiratory diseases caused by IM problems, some theriogenology and classical oncology problems, and some on epidemiology and test performance/interpretation.

**Small Animal Surgical Pathology**

A Case-Based Approach

**Jolle Kirpensteijn**, Hills Pet Nutrition, Topeka, Kansas, USA and **Michael J. Day**, University of Bristol, Langford, UK

Targeting first opinion practitioners as well as specialist surgeons and pathologists (including those in residency training programmes), this book covers the surgical procedure and follow-up histopathological diagnosis using a case-based approach. Each case begins with a short description of the clinical signs, giving a picture of the lesion (gross and/or imaging) surgical procedure and then discussing the histopathological diagnosis including evaluation of expression of immunohistochemical markers where relevant. The chapters are organized according to the main anatomical locations dealt with by surgeons.

**Small Animal Imaging**

Self-Assessment Review

**John S. Mattoon**, Adjunct Professor of Radiology, College of Veterinary Medicine, Washington State University, USA, and **Dana Neelis**

Series: *Veterinary Self-Assessment Color Review Series*

Presented in an easy-to-ready format, Small Animal Imaging: Self-Assessment Color Review offers a case-based approach to reviewing and interpreting images and developing a differential diagnosis when necessary. Nearly 200 cases are presented, each beginning with the patient's age, gender, breed, and species. The reason the patient was brought to the clinic is discussed along with preliminary examination and diagnostic test findings. Supporting high-quality images are also presented with each

case. A separate section presents detailed answers including information on the radiographic findings, radiographic diagnosis, comments, and notes on whether further imaging or evaluation is needed.

## The Welfare of Cattle

Edited by **Terry Engle**, National Agricultural Research Foundation, Ioannina, Greece, **Donald J. Klingborg, DVM**, School of Veterinary Medicine, University of California, Davis, USA and **Bernard E. Rollin**, Colorado State University, Fort Collins, USA

*The Welfare of Cattle* offers an accurate, detailed account of the ethical and welfare concerns related to the human use of cattle. Covering both beef and dairy cattle, this book provides in-depth information on the husbandry roots of traditional agriculture, the replacement of this system by an industrial model, and the resulting welfare challenges associated with feedlots, highly industrialized dairies, and slaughterhouses

killing huge numbers of animals who have been transported great distances. It explores the ways in which people who are providing care for cattle can take their first step, or their next step, toward enhancing the welfare of these animals.

## Veterinary Nursing Care Plans

Theory and Practice

**Helen Ballantyne**

This book offers a broad overview of the theory and practice of care planning in veterinary nursing, answering three key questions: *What* are nursing care plans? *Why* should nursing care plans be used in practice? *How* should nursing care plans be used in practice? It provides basic definitions and explanations, the philosophical and theoretical aspects of nursing, and draws comparisons and contrasts between the veterinary and human nursing roles and contexts. There is a pressing need for veterinary nurses to establish themselves as professionals and develop their unique role within the veterinary care team. Nursing care plans are a core tool to support that

development.
